Class StringFun

java.lang.Object StringFun

public class StringFun
extends java.lang.Object

Version:

1.0

Description: This program takes in strings as arguments in the command line and performs various string methods. The two extra methods that I chose were is Empty and replaceAll. is Empty checks if the string has any characters and if not it returns true. I also chose replaceAll which replaces a character or part of a string with another of your choosing.
